

CAN I COMBINE SCIENCE AND BUSINESS IN A SINGLE JOB?

YES.

We'll show you how at Fraunhofer.

MICROBIOLOGY GUIDED NATURAL PRODUCTS RESEARCH IS YOUR TOPIC? THE FRAUNHOFER IME, PROJECT GROUP BIORESSOURCEN LOCATED IN GIESSEN (GERMANY) SEEKS FOR A HIGHLY MOTIVATED STUDENT TO FILL IN A

PHD STUDENT POSITION IN MICROBIOLOGY – INTEGRATION OF HETEROLOGOUS EXPRESSION PIPELINES INTO HT SCREENING APPROACHES

Fraunhofer as the largest research organization for applied science in Europe has joined forces with the multinational pharmaceutical company Sanofi to fund the Sanofi-Fraunhofer Natural Product Center of Excellence in Frankfurt, Germany. Scientists of the project group Bio-resources of the Fraunhofer Institute for Molecular Biology and Applied Ecology (IME) work together at the same benches with scientists of the pharmaceutical company Sanofi-Aventis Germany with the goal to identify and develop innovative drugs for the treatment of bacterial infections.

This multi-disciplinary team is currently building up new tasks, in which the announced position needs to be filled by a highly motivated and responsible PhD student. The main focus for this position is the application of established strategies in heterologous expression of biosynthetic gene clusters in high throughput screening pipelines. This includes the work with arrayed clone libraries as well as the application of innovative Microfluidics and FACS based approaches with the aim to

identify novel lead structures for antibiotics development with a focus on Gram negative bacteria. The support of our center in all activities related to microbiology and molecular biology is expected in terms of host and screening strain development. Being embedded in a group that spans the entire discovery pipeline from the access of novel producer bacteria from untapped bio-resources up to structure elucidation and lead structure evaluation is the main advantage of the announced position. Exploiting the uncultured microbial diversity is seen as the key for novel drug discovery and heterologous expression of gene clusters from uncultured bacteria at high throughput is the ultimate goal of this project and should be accomplished by working in a multidisciplinary team of scientists in an industrial environment.

Your tasks:

- Implementation and application of high throughput cloning and screening approaches and their integration into established drug discovery pipelines
- Participation in drug discovery programs
- Interaction with all groups of our discovery pipeline, especially innovative cultivation, screening and chemical analytics

What we expect from you

- A qualifying university degree in the fields of Molecular Microbiology or Molecular Biotechnology
- Experience in molecular cloning and the generation of clone libraries
- Sound knowledge in the cultivation and physiology of a wide range of microorganisms
- An interest in natural products and their analysis
- Team spirit and excellent communication skills as well as efficient organization of your work and experience in the guidance of technical staff
- An interest to work in a multi-cultural, interdisciplinary team
- Excellent English

What you can expect from us

- Highly interesting research projects in Applied and Molecular Microbiology
- Experience in lead structure identification and evaluation
- An environment that allows team-oriented work with a focus on drug discovery and development
- Excellent infrastructure
- A network with academic and industrial cooperation-partners
- Further education and training in your field of expertise

Appointment, remuneration and social security benefits based on the public-sector collective wage agreement (TVöD). Additionally Fraunhofer may grant performance-based variable remuneration components.

The working time consists of 39 hours per week.

The position is initially limited until 31.12.2019.

In case of identical qualifications, preference will be given to severely disabled candidates.

The Fraunhofer-Gesellschaft is committed to providing equal career opportunities for men and women.

This vacancy is also available on a part-time basis.

Fraunhofer is Europe's largest application-oriented research organization. Our research efforts are geared entirely to people's needs: health, security, communication, energy and the environment. As a result, the work undertaken by our researchers and developers has a significant impact on people's lives. We are creative. We shape technology. We design products. We improve methods and techniques. We open up new vistas.

For questions about this position please contact Ms. Ricarda Döring.

Please apply directly online by clicking on the blue "Apply" button. Please abstain from submitting paper copies for environmental reasons.
