

Alex Toftgaard Nielsen is a professor at the Novo Nordisk Foundation Center for Biosustainability, Technical University of Denmark. He has a background in metabolic engineering, bacterial physiology, and industrial biotechnology. He has completed five years of postdoctoral research at Stanford University, and he has held positions at two different companies, Exiqon in Denmark and Genencor in California, USA. His major scientific focus is on production of biochemicals and proteins by metabolic engineering of bacteria, and he is co-founder of three biotech companies commercializing such technologies.
