

Christin Koch, Symrise AG, Holzminden

Dr. Christin Koch is Director Microbiology Research in the division Global Innovation Cosmetic Ingredients at Symrise, a global supplier of fragrances, flavorings, cosmetic base materials and substances as well as functional ingredients. She is a microbiologist and microbial ecologist by education. She received her PhD in 2013 from the University of Leipzig (Germany) on the characterization of natural microbiome dynamics based on single-cell technologies. Until 2017 she has been working at the Helmholtz Centre for Environmental Research focusing on environmental microbiology and bioelectrochemistry. At Symrise, she transferred her knowledge to the human microbiome, exploring the different ecological niches of the human body with the aim of respective product developments. She is the scientific lead of the SymProBiome™ microbiome platform. In the last years, she has published over 30 peer-reviewed articles in the field of microbiome research.
